The EconoFoam XM-II is a new generation of wildland foam systems. A true FOAM INJECTION SYSTEM, the EconoFoam XM-II works with system pressures up to 300 psi.

How It Works

The EconoFoam XM-II allows the fireman to set the amount of foam concentrate being injected into the discharge stream, from no foam to as much as one gallon per minute. This allows a concentration from an economical surface tension-breaking suds solution to a heavy-bodied, long lasting foam.

Kit Includes

- 2-wire electrical power hook-up
- Foam cell level sensor and lead
- Foam supply tubing
- Installation instructions
